

Adjusting the row / column width and height

Microsoft Excel

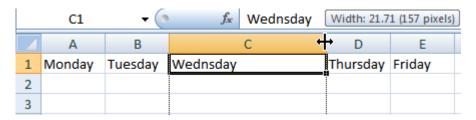

Resizing a single column width

1. Place your cursor over the dividing line, i.e., between column headers

Tip
Your mouse pointer should become
(Resize Column shape).

2. Click and drag the dividing line.

3. Release your mouse

	Α	В	С	D	Е
1	Monday	Tuesday	Wednsday	Thursday	Friday
2					
3					

Tip

When you **double click** in the same spot (the right edge of the column), it will fit to the **longest** text in any cell in the column.

Resizing multiple columns simultaneously

1. Select columns that you wish to alter (click on the column header)

	A1	→ (0	f_x	
	Α	В	С	D
1				
2				
2 3 4 5				
4				
5				
6				
7				
8				

2. Click and drag one of the selected columns' header

	A1	- (9	f _x W	idth: 15.43 (113 pixels)
	Α	В	С	D
1				
2				
3				
4				
5				
6				
7				
8				

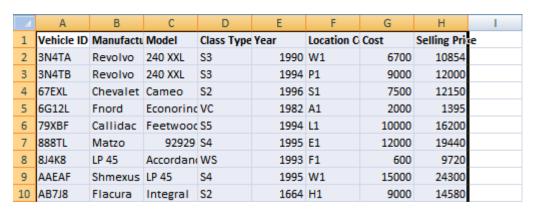

3. Release your mouse when you reach the desired column width.

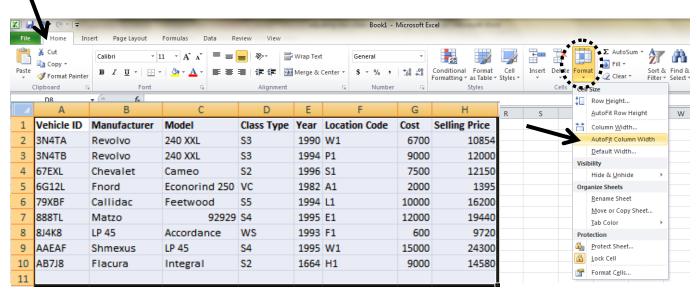

Resizing multiple columns to fit individual cell contents - AutoFit Selection

1. Select columns that you wish to fit the column size according to the cell contents

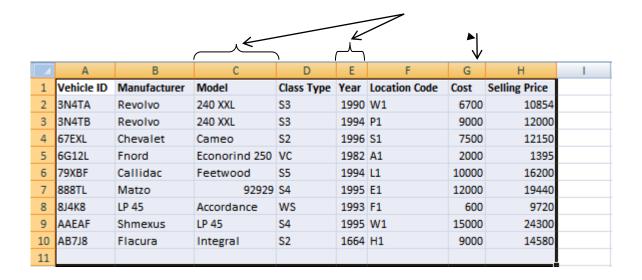

2. Home > Format

Done!

Resizing Row or Columns Numerically

To adjust the size of Rows or Columns numerically right click on the row or column and select **Row Height** or **Column Width**, enter desired value in window. You can also select multiple Rows or Columns to adjust multiple cells height or width at once.

Note: if the Row Height or Column Width box is empty the current selection contains different values, enter a value to make the cell sizes uniform.
